Dear Diary,

I am having a great time exploring space! Today I sent a rover out to the moon to take videos and photographs to study. I saw the footprints from the first astronaut to walk on the moon- they're still there since there's no weather in space to blow them away. Through my spaceship window I also saw the outer planets- did you know that they are very large, and all have rings? I wonder what amazing things I will see tomorrow!

Sincerely,
Beth
